

Redesign the Misleading Colored Chart

R.No: 20 Reg. No: 192525265 Name: Kuruba Vannur Swamy

Each chart below uses color in a misleading or confusing way. For each one, answer the three questions in your own words.

Chart 1

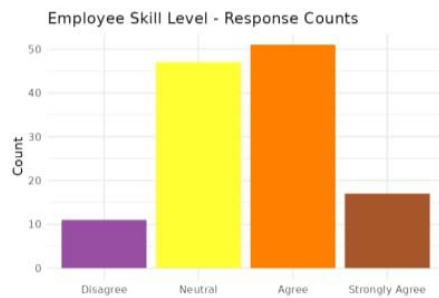

1. What is this chart trying to show?

2. What's wrong with the color choice?

3. Propose a better color scheme (describe it in words):

Chart 2

1. What is this chart trying to show?

2. What's wrong with the color choice?

3. Propose a better color scheme (describe it in words):

Chart 1

1. What is this chart trying to show?

It shows the number of target goals met and missed by each group (Group 1 to Group 6).

2. What's wrong with the color choice?

The red and green colors can be confusing because they may suggest danger/good or stop/go, rather than simply showing two categories. The colors also may be difficult for people with color-vision deficiency.

3. Propose a better color scheme:

Use blue for Target Met and light gray for Missed. These colors are clear, professional, and easy to distinguish.

Chart 2

1. What is this chart trying to show?

It shows the number of employee responses for different skill-level opinions, from Disagree to Strongly Agree.

2. What's wrong with the color choice?

The chart uses many unrelated bright colors. This makes the categories look equally important and does not clearly show the order from negative to positive.

3. Propose a better color scheme:

Use a single-color gradient from light to dark, or a diverging color scheme:

- Disagree – light red
- Neutral – gray
- Agree – light blue
- Strongly Agree – dark blue
